COMPLAINTAI-BANK

DEBIT AND CREDIT CARD SERVICES POLICY

Policy ID: CPB-POL-002
Version: 1.0
Policy Category: Debit and Credit Card Services

1. Purpose

Purpose

This policy establishes consistent requirements for the application, issue, activation, use, protection, servicing, replacement, suspension, and cancellation of debit and credit cards. It describes the responsibilities of cardholders, the controls that may affect card transactions, and the procedures for addressing card-service problems.

The policy is intended to support secure and traceable card usage, clear communication, accurate transaction review, and consistent treatment of service requests. It covers routine card servicing as well as incidents involving suspected unauthorized use, lost or stolen cards, disputed transactions, billing questions, failed cash withdrawals, and card access restrictions.

The requirements below describe the general policy framework. Where a particular card product or transaction has specific eligibility conditions, limits, fees, payment requirements, or dispute procedures, the applicable product terms and approved service instructions determine the exact condition.

2. Scope

Services included

This policy applies to debit cards linked to deposit accounts and credit cards made available under an approved credit facility. It addresses the complete card-service lifecycle, from application and delivery through day-to-day usage and eventual cancellation.

The policy covers the following areas:

- Card eligibility, application review, issuance, delivery, activation, PIN management, and authentication.
- Point-of-sale, contactless, online, telephone, ATM, cash-advance, international, and digital-wallet transactions.
- Transaction approvals and declines, usage limits, available balances, credit limits, billing statements, repayments, fees, and interest.
- Lost, stolen, damaged, retained, expired, or compromised cards; blocking, replacement, and cancellation.
- Unrecognized, duplicated, failed, reversed, pending, incorrect, or refunded transactions and related investigations.
- Customer complaints, supporting evidence, case references, privacy, access control, and recordkeeping.

This policy does not establish one universal fee, limit, exchange rate, repayment amount, grace period, or investigation deadline for every card. Such details must be verified against the applicable card product terms and current service instructions before being stated as fact.

3. Definitions

Terms used in this policy

Debit Card: A payment card that generally uses funds in a linked deposit account, subject to available balance, holds, account conditions, and transaction controls.

Credit Card: A payment card that permits eligible transactions against an approved credit limit and creates repayment obligations under the applicable card agreement.

Cardholder: The customer to whom a card is issued, or a person otherwise formally authorized to use a card under the relevant arrangement.

Card Account: The deposit account linked to a debit card or the credit facility and billing record associated with a credit card.

Card Transaction: A purchase, cash withdrawal, cash advance, payment, refund, reversal, fee, adjustment, or other activity processed against a card or its linked account.

Authorization: A transaction-stage decision or verification that determines whether a requested card transaction may proceed, subject to subsequent processing and settlement.

Pending Transaction: A transaction that has been initiated or authorized but has not yet reached its final posting, settlement, reversal, or release state.

Posted Transaction: A transaction recorded as completed in the relevant card or account record. Posting does not, by itself, prevent a transaction from being reviewed through an available dispute process.

Disputed Transaction: A transaction that a cardholder formally questions because it is unfamiliar, duplicated, incorrectly processed, related to a service not received, or otherwise believed to be inaccurate.

Card Block: A temporary or permanent restriction intended to prevent some or all further use of a card or card credential.

Card Replacement: The issue of a new card to replace a lost, stolen, damaged, expired, retained, compromised, or unusable card.

Card-not-present Transaction: A transaction initiated without physically presenting the card to the merchant, such as an online, telephone, or mail-order payment.

Cash Advance: A transaction in which funds are obtained using a credit card, generally subject to separate limits, charges, and interest treatment under the card terms.

Complaint Reference: A unique identifier assigned after a complaint has been successfully saved in the complaint-management record.

Provisional Credit: A temporary account adjustment that may be made while a dispute is under review; it is not necessarily a final decision or a permanent refund.

Authentication Credential: A PIN, password, one-time passcode, security code, or other secret or approval method used to verify identity or authorize access or transactions.

4. Card Application, Eligibility and Issuance

4.1 Eligibility and application review

Eligibility depends on the card product, customer category, age, identity verification, the status of any linked deposit account or credit facility, and applicable legal and product requirements. Credit-card assessment may also consider income, affordability, creditworthiness, existing obligations, and other stated eligibility factors.

Applicants must submit accurate, complete, and current information and any documents required for the selected product. Information may be checked for consistency and authenticity before a decision is made. Additional information may be requested where submitted details are incomplete, unclear, outdated, or cannot be verified.

An application may remain pending while checks or documents are outstanding, or may be declined when the eligibility or verification requirements are not met. Submission of an application, provision of supporting documents, or receipt of an acknowledgement does not guarantee approval or a particular delivery date.

4.2 Issue, delivery and receipt

A card should be issued only after the required approval and verification steps are completed. Delivery or collection arrangements depend on the selected product and available servicing method. Customers should keep contact and delivery details current so the card can be delivered through the approved process.

On receipt, the customer should check that the card is intended for them and that its packaging or delivery condition does not raise a concern. A card that is missing, incorrectly delivered, visibly damaged, or suspected of being tampered with should be reported promptly. The customer should not activate or use a card where its ownership or integrity is uncertain.

4.3 Delivery delays and failed delivery

If a card is not received within the timeframe communicated for the service, the customer should contact an authorized support channel. The review may check the issue date, delivery address, courier or collection status where available, and whether a protective block or replacement is appropriate.

A delivery enquiry should be distinguished from a report that a card has been stolen or used without authorization. If unauthorized possession or suspicious activity is suspected, the customer should promptly request the relevant security controls rather than relying only on a delivery enquiry.

5. Activation, PIN and Authentication

5.1 Card activation

A newly issued or replacement card may require activation before transactions can be performed. Activation must follow the instructions supplied with the card or shown in an authorized service channel and may require identity verification or an additional authentication step.

Delivery alone does not establish that a card is active. If activation fails, the customer should check the card status through an approved channel and report the error, the approximate time of the attempt, and the error message where it can safely be shared. The customer must not include authentication secrets in the service request.

5.2 Protection of PIN and authentication credentials

Customers are responsible for keeping their cards and authentication credentials secure. PINs, passwords, one-time passcodes, CVVs, security answers, and device approvals must not be disclosed to another person or entered into a page or application whose authenticity is uncertain.

Credentials should not be written on the card or stored in a manner that allows another person to obtain them easily. Customers should secure devices used for card management and digital-wallet payments, use device-lock features, and avoid approving requests they did not initiate.

Customer-support conversations and complaint descriptions must never ask for or retain a PIN, CVV, password, or one-time passcode. Where a customer believes that a credential has been exposed, the customer should promptly use an authorized security channel to change, disable, or protect the affected access method and card.

5.3 Failed authentication and locked access

Repeated incorrect PIN entries or failed authentication attempts may result in a card, feature, or access method being temporarily restricted. Customers should follow the approved reset or recovery process and should not repeatedly retry a transaction when the service indicates that the card is blocked or authentication is required.

A restriction should be described accurately: a PIN lock, temporary security block, expired card, declined transaction, and permanent cancellation are different conditions and may require different corrective steps.

6. Permitted Use and Transaction Controls

6.1 Authorized use and acceptable handling

A card may be used by the cardholder or a person formally permitted under the card arrangement. Customers must follow the product terms, applicable transaction controls, merchant requirements, and relevant legal requirements. A card and its credentials must not be lent or disclosed in a way that gives an unauthorized person access to the card account.

Customers should retain receipts, digital confirmations, and order records where relevant. These records may help reconcile the statement, identify a merchant descriptor, confirm a purchase amount, or support an investigation. A receipt should be compared with the posted transaction before a discrepancy is reported as a confirmed error.

6.2 Authorization, declines and transaction limits

A transaction may be approved or declined based on available funds or credit, card status, configured limits, merchant or channel controls, authentication outcome, suspected fraud, system availability, or other checks permitted under the product terms.

Daily purchase limits, ATM withdrawal limits, contactless limits, online-use settings, cash-advance limits, and international-use controls may differ by card product and customer settings. Customers should confirm the limit relevant to their own card instead of assuming that a limit described for another product applies to them.

A declined transaction does not, on its own, establish that funds have been lost, that the merchant completed the payment, or that the card has been permanently cancelled. Customers should check the message or card status and contact support with the date, amount, merchant or ATM, and any reference provided.

6.3 Contactless and digital-wallet usage

Contactless transactions and digital-wallet payments may require device enrollment, authentication, merchant acceptance, transaction limits, or additional security checks. A digital token stored on a device may be managed separately from the physical card, depending on the service arrangement.

Customers should protect devices used for payments and promptly report a lost or compromised device, unknown wallet activity, or suspected unauthorized transaction. The support process may include blocking the physical card, disabling a digital token, checking recent activity, or requiring re-verification.

7. Online, International and Cash Transactions

7.1 Online and card-not-present payments

Online, telephone, mail-order, and other card-not-present payments may use additional authentication or verification. Before entering card details, customers should check that the merchant and payment page are genuine, confirm the order amount and currency, and review the merchant information presented at checkout.

Customers should be cautious of unsolicited messages requesting card details, one-time passcodes, or approval of a transaction. If credentials may have been exposed, or an online transaction is unfamiliar, the customer should promptly report the event and request appropriate protection through an authorized security channel.

An online purchase may appear under a merchant name, payment processor, marketplace, or abbreviated descriptor that differs from the website name. Before classifying a transaction as unauthorized, the customer should check available receipts, order history, subscriptions, and communications. This check should not delay urgent reporting where fraud is suspected.

7.2 International transactions and currency conversion

A purchase or withdrawal in a foreign currency may be converted according to the applicable card agreement and the relevant transaction-processing arrangements. The final posted amount may differ from the amount estimated at authorization because of the exchange rate used at processing, the timing of settlement, or adjustments made by the merchant or payment service.

Any currency-conversion markup or international transaction fee must be verified against the terms and charges applicable to the specific card. The policy does not establish one universal exchange rate or fee for all transactions.

A query about an international transaction should include the transaction date, merchant, original currency and amount where available, posted amount, and reference. The review should distinguish a conversion difference from a duplicate charge, an incorrect amount, or an unfamiliar transaction.

7.3 ATM withdrawals and cash advances

Cash withdrawals are subject to card eligibility, available funds or credit, withdrawal limits, ATM capability, authentication, security checks, and applicable charges. A credit-card cash advance may be treated differently from a debit-card withdrawal and may have separate fees, interest treatment, or limits.

If an ATM does not dispense the requested cash, dispenses an incorrect amount, retains the card, or appears to debit an amount incorrectly, the customer should record the ATM location, date, approximate time, amount, receipt or error message, and transaction reference where available. The customer should report the incident promptly through an authorized channel.

An adjustment or reversal must not be described as complete until the relevant account record or authorized process confirms it. The review may require checking the transaction status, ATM records, cash-dispensing information, and settlement details.

8. Credit Card Statements, Repayments and Charges

8.1 Statement review and balance calculation

A credit-card statement may show posted purchases, cash advances, payments, fees, interest, adjustments, refunds, and the balance for the relevant billing cycle. Customers should review the statement and compare transactions with receipts, order confirmations, and other available records.

A pending authorization may not yet appear as a final posted transaction. Similarly, a merchant refund or reversal may take time to appear in the account. The status of an item should be checked before it is described as finally charged, refunded, or reversed.

8.2 Payment amount and due date

Customers must follow the payment amount and due date stated in the applicable credit-card statement and agreement. The required minimum payment, payment allocation method, interest calculation, grace-period conditions, and consequences of late or missed payments are product-specific and must be confirmed from the applicable terms.

Customers should allow sufficient time for the selected payment method to be processed and should retain payment confirmation until the credit-card record reflects the payment. If a payment is not reflected as expected, the enquiry should include the payment date, amount, method, confirmation or reference, and the card statement period.

A dispute about one transaction does not automatically suspend every payment obligation or determine the amount due on the account. Customers should follow the formal dispute process and seek clarification through an authorized channel about the amount that remains payable while the transaction is reviewed.

8.3 Fees, interest and cash advances

Annual or monthly card fees, cash-advance fees, foreign-currency charges, late-payment charges, interest, instalment charges, and other costs depend on the particular card product and applicable schedule of charges. The amount or rate must not be quoted as universal unless supported by the current terms applicable to the customer.

A fee or interest query should identify the statement date, description, amount, and relevant transaction or billing reference. The review may consider the card agreement, applicable pricing schedule, transaction type, posting date, payment history, and whether an adjustment or refund is supported by the terms.

8.4 Payments, refunds and credit availability

A payment to a credit-card account may reduce the outstanding balance when received and processed, but available credit may not update at the same time as the payment instruction. The customer should check the posted status and contact support if the payment cannot be identified or the balance remains inconsistent.

A merchant refund is separate from a customer payment and may appear as an adjustment to the card account. Customers should retain the merchant refund confirmation and report the issue if the refund is not reflected within the timeframe stated for the transaction or confirmed during an investigation.

9. Debit Card Funding and Linked Accounts

9.1 Available funds and transaction holds

Debit-card spending is generally constrained by funds available in the linked account, account conditions, transaction limits, and authorization controls. The displayed account balance may differ from the amount available for immediate use because of pending card authorizations, holds, uncleared deposits, fees, or other adjustments.

A pending authorization may temporarily affect the amount available before the merchant completes or cancels the transaction. The duration and release process depend on the transaction type and processing rules; a fixed release date must not be promised unless it is confirmed by the applicable terms or transaction record.

9.2 Card and account linkage

A debit card may be linked to a specified deposit account or account arrangement. Changes to the linked account, account status, card status, or customer authorization may affect the card’s ability to transact. Requests to change or confirm linkage must follow the authorized verification procedure.

If the card is declined despite an apparently sufficient balance, the review may consider the amount available for use, pending holds, transaction limits, card activation or expiry, the merchant channel, and any security or account restriction.

9.3 Unrecognized debits and balance discrepancies

Customers should report an unfamiliar debit, duplicate debit, incorrect amount, or unexplained change in available balance promptly. The report should include the transaction date, amount, description, card or account reference sufficient to locate the transaction, and supporting evidence where available.

The investigation should distinguish between a completed debit, a pending authorization, an account fee, a merchant adjustment, and a transaction that has been reversed. Any correction must follow the required authorization process and should be treated as complete only after confirmation.

10. Lost, Stolen, Damaged or Compromised Cards

10.1 Immediate protective action

A customer who loses a card, suspects theft, discovers unauthorized possession, or believes card details or a payment token have been compromised should promptly use an authorized card-blocking or security-reporting channel. The customer should request an appropriate block and follow instructions for protecting the linked account, digital wallet, or other affected access method.

The customer should provide the time the incident was noticed, the card or service involved, recent suspicious activity, and related transaction references where known. A full card number or sensitive authentication credential should not be included in an ordinary complaint narrative.

Where an unauthorized transaction is visible, the customer should report both the security incident and the specific transaction. Blocking a card protects against some future usage but does not itself resolve a transaction that has already been authorized, posted, or submitted for settlement.

10.2 Replacement and delivery

A replacement card may be requested where the card is lost, stolen, damaged, compromised, expired, retained by an ATM, or otherwise unusable. Availability, delivery method, processing time, and any replacement charge depend on the applicable card product and service procedure.

The customer should confirm whether the prior card has been blocked or cancelled and follow the replacement activation instructions once the new card is received. A card reported lost or stolen must not be assumed safe to use if it is later found; the customer should follow the instructions provided through the authorized channel.

Where a card is physically damaged, the customer should stop using it if continued use could lead to further damage or unreliable transaction processing and request guidance about replacement. Any required return or disposal of the old card should follow the approved instructions.

10.3 Investigation and responsibility

Responsibility for transactions made before or after the incident report depends on the applicable card terms, reporting timeline, transaction evidence, circumstances of the event, and relevant legal requirements. The fact that a card was lost or reported does not, by itself, determine the final liability outcome.

The investigation may request a transaction list, receipts, merchant communication, messages that appear fraudulent, or other relevant evidence. Customers should preserve this information and cooperate with reasonable requests while avoiding unnecessary disclosure of unrelated personal information.

11. Disputed, Failed, Reversed and Refunded Transactions

11.1 Grounds for raising a dispute

A customer may question a transaction that is not recognized, appears twice, has an incorrect amount or currency, relates to goods or services not received, concerns a cancelled order, reflects an unexpected cash withdrawal, or otherwise does not match the customer's records.

A complaint about merchant service quality may require order details, cancellation confirmation, proof of return, receipts, or correspondence with the merchant. This evidence requirement should not delay prompt security reporting where the customer suspects unauthorized use.

11.2 Information and documents required

A dispute should identify the transaction as precisely as possible. Relevant details may include transaction date, posted amount and currency, merchant descriptor, transaction reference, card type, location or channel, and a clear statement of the reason for the dispute.

Supporting evidence should be relevant, readable, and limited to what is needed to assess the claim. Customers should not submit PINs, CVVs, passwords, one-time passcodes, or unrelated sensitive records. Additional information may be requested where necessary to distinguish between a valid transaction, a processing error, and unauthorized use.

11.3 Investigation and possible outcomes

The responsible review may consider authorization records, transaction status, merchant information, settlement details, customer-provided evidence, and the rules applicable to the card and transaction type. A review may result in a correction, reversal, refund, additional information request, or a decision that the transaction remains valid.

A transaction must not be described as fraudulent solely because the customer does not recognize the merchant descriptor; the evidence must be reviewed. Conversely, the customer's report should be recorded and assessed rather than rejected solely because the transaction passed an initial authorization check.

A provisional credit, where permitted and applied, is temporary unless the authorized process confirms that it is final. The status of a provisional adjustment must be communicated accurately, and any later adjustment must be explained according to the applicable process.

11.4 Pending transactions and duplicate entries

A pending authorization may later post, be adjusted, or be released. A merchant may also submit a final amount that differs from the initial authorization because of an authorized tip, partial fulfilment, currency processing, or other transaction-specific reason. The relevant details should be checked before treating the difference as an error.

If a customer sees two entries for one purchase, both entries should be supplied in the complaint with any receipt or order confirmation. The review should determine whether there are two posted charges, a pending authorization plus a posted transaction, or another processing condition.

11.5 Refund tracking and case closure

Where a merchant has initiated a refund, the customer should retain the refund receipt or confirmation and provide the transaction details if the credit is not reflected as expected. The investigation should check whether the refund was submitted, processed, rejected, or applied against another transaction or balance.

A dispute remains open until the authorized process records an outcome and the customer is informed according to the applicable procedure. A submitted form, acknowledgement, or provisional credit should not be represented as a completed final resolution.

12. Card Blocking, Suspension and Cancellation

12.1 Temporary block and permanent cancellation

A temporary block is intended to restrict use while a card, transaction, credential, or customer instruction is reviewed. Permanent cancellation ends the card’s active use under the applicable process. These statuses are different and must be recorded and described accurately.

A block may prevent some or all new transactions but may not stop transactions that were already authorized or submitted for settlement. A customer with recurring payments or digital-wallet tokens should check whether separate steps are required to stop those payment arrangements.

12.2 Restrictions applied for security or servicing reasons

Card usage may be restricted where suspicious activity, compromised credentials, repeated authentication failures, expired card status, missing verification, legal requirements, or other permitted circumstances require review.

The customer may be asked to verify identity, confirm recent transactions, update information, or complete another protective step. The reason and scope of a restriction should be communicated to the extent permitted. Where details cannot be disclosed, the customer should receive clear instructions for the next authorized step.

Removal of a block or restriction depends on the result of the review, successful verification, and applicable requirements. A representative or automated assistant must not promise immediate restoration before the relevant status has been checked and the action confirmed.

12.3 Cancellation and continuing obligations

A customer requesting card cancellation must use an authorized channel and complete required identity checks. Any outstanding credit-card balance, pending transaction, fee, instalment, or other obligation may continue to require attention after card cancellation.

Before treating cancellation as complete, the process should verify the card status and record the confirmation. Customers should retain the confirmation and update merchants that rely on recurring payments. Cancelling a card does not necessarily close the linked deposit account or settle the related credit balance.

13. Customer Responsibilities and Safe Card Use

Customer responsibilities

Customers are expected to:

- Keep the card and associated authentication credentials secure and promptly report suspected compromise.
- Never disclose a PIN, CVV, password, or one-time passcode and never include these credentials in a complaint.
- Review card statements and transaction notifications and report unfamiliar, duplicated, or incorrect entries promptly.
- Use the card in accordance with the applicable card terms, transaction limits, and permitted channels.
- Keep registered contact and required identification information current and respond to reasonable verification requests.
- Retain receipts, order confirmations, payment confirmations, dispute evidence, and complaint references where relevant.
- Report lost, stolen, damaged, retained, or compromised cards without unnecessary delay.
- Meet credit-card payment obligations according to the applicable statement and agreement, while using the authorized process to query a disputed amount.
- Check merchant details and amounts before confirming a purchase, especially for online, recurring, international, and cash-related transactions.
- Use approved channels for activation, replacement, blocking, cancellation, limit enquiries, and other sensitive card requests.
- Provide truthful and relevant information during a review and notify the responsible channel if new evidence becomes available.
- Avoid making repeated payment attempts after an error where doing so could create duplicate authorizations; first check the transaction status or seek guidance.

14. Card Complaint Registration and Resolution

14.1 Complaints covered

A complaint may concern application or delivery, activation, PIN or authentication problems, a declined transaction, ATM cash not received, incorrect balance, billing or payment posting, a fee or interest entry, international conversion, lost or stolen card handling, replacement, an unfamiliar transaction, a disputed purchase, a refund, a block, or cancellation.

Urgent security incidents should be reported through a security or card-blocking channel in addition to any general complaint. A complaint record must not be treated as a substitute for taking immediate protective action where a card or credential may be compromised.

14.2 Complaint details and evidence

A useful complaint description identifies the card service involved, what happened, when it happened, what result the customer expected, and what result occurred instead. For a transaction complaint, include the date, amount, currency, merchant or ATM, reference if available, and whether the item is pending or posted.

Supporting documents may include statements, receipts, order confirmations, payment confirmations, cancellation records, screenshots with sensitive details concealed, or communications relevant to the event. Do not request or store PINs, CVVs, passwords, one-time passcodes, or unnecessary full card numbers.

14.3 Registration, assignment and investigation

A complaint is registered only after the complaint record has been successfully saved. Once registration succeeds, the system should assign and return a unique complaint reference that the customer can retain for subsequent enquiries.

The complaint should be categorized by its main issue and assigned to an appropriate review queue according to the configured process. The assigned reviewer may inspect transaction records, check card status, assess supporting evidence, seek clarification, and determine whether further action is supported.

If required information is missing, the case should remain identifiable and the customer should be asked for the specific details needed. An incomplete record should not be represented as a completed investigation or a confirmed refund.

14.4 Status communication and escalation

Customer communication should clearly distinguish acknowledgement, information requested, investigation in progress, provisional adjustment, final decision, and closure. The customer should be told what action is needed next and how to quote the complaint reference.

Response deadlines or resolution periods should be stated only when supported by the applicable complaint process or confirmed case status. If a customer remains dissatisfied or the matter is unresolved, the customer should be given the applicable escalation route and any relevant case information.

15. Information Protection and Recordkeeping

15.1 Collection and use of information

Cardholder and transaction information should be collected only to the extent required for authorized servicing, authentication, security, investigation, payment processing, complaint handling, or another permitted purpose. Requests should be proportionate to the issue being investigated.

Sensitive authentication information, including PINs, CVVs, passwords, and one-time passcodes, must not be placed in complaint text, administrative notes, logs, or ordinary support exports. Where a card or account identifier is needed for record matching, the minimum information sufficient for that purpose should be used.

15.2 Access controls and secure handling

Access to cardholder records should be limited to authorized users who need the information for their assigned role. Records should be protected against unauthorized access, disclosure, alteration, copying, loss, or destruction through appropriate access control and secure storage practices.

Customer-facing interfaces must not expose internal complaint notes, risk indicators, staff-only comments, or information about another customer. Administrative exports should be restricted to authorized administrators and handled as confidential records.

15.3 Accuracy, retention and auditability

Complaint records should distinguish customer-provided statements from verified transaction facts, system-generated classifications, and decisions made by an authorized reviewer. Corrections should be made through a controlled process so the record remains understandable and auditable.

Records and supporting documents must be retained and disposed of according to applicable legal, regulatory, contractual, and organizational requirements. Access to or disclosure of information to an authorized authority or permitted party must follow the applicable rules.

16. Exceptions, Interpretation and Policy Review

16.1 Product-specific terms and unresolved questions

Card eligibility, payment obligations, fees, interest, limits, liability, dispute eligibility, and processing periods may vary by product, transaction channel, and customer circumstances. Where a question depends on a specific card agreement, current fee schedule, or applicable procedure, that source must be consulted before a definitive answer is given.

If the available policy documents do not establish a particular amount, rate, deadline, condition, liability outcome, or eligibility rule, that detail must not be invented or presented as confirmed. The customer should be directed to an authorized channel for confirmation.

16.2 Interpretation and consistent application

This policy sets out general card-service principles and does not replace the terms governing a particular card product. In a case-specific decision, the applicable card terms and required review process must be considered together with the facts and evidence available.

No customer communication should claim that a card has been blocked, replaced, refunded, escalated, or cancelled unless the corresponding action has actually been confirmed in the relevant record or by the authorized service process.

16.3 Review and revision

This policy should be reviewed when card products, security controls, transaction-processing procedures, complaint workflows, or applicable requirements change. Revisions should preserve consistent terminology and identify the updated version.

Any workflow-specific functionality added for ComPlaintAI-Bank should be described as a system procedure and must not be represented as a confirmed external banking action unless a working, authorized integration verifies that action.
