COMPLAINTAI-BANK

FUND TRANSFERS, REMITTANCES AND REFUNDS POLICY

Policy ID: CPB-POL-004

Version: 1.0

Policy Category: Fund Transfers, Remittances and Refunds

1. Purpose

Objectives

This policy establishes procedures for initiating, processing, tracking, investigating, correcting, and refunding domestic and international transfers and remittances. It defines customer responsibilities, required payment information, and the controls used when a payment is delayed, rejected, duplicated, misdirected, or suspected to be unauthorized.

The policy supports accurate payment instructions, clear status communication, appropriate protection of customer information, and consistent complaint handling. A request to cancel, recall, recover, or refund a payment must not be described as successful until the relevant outcome is confirmed.

2. Scope

Services covered

This policy applies to domestic transfers, international remittances, beneficiary setup and maintenance, scheduled transfers where supported, delayed or missing payments, rejected or returned transfers, incorrect recipient details, duplicate payments, cancellation and recovery requests, refunds, exchange-rate and fee enquiries, and related complaints.

Available features and conditions depend on the payment channel, account product, currency, destination, transaction type, and applicable terms. Card-payment disputes are covered by the card policy; where a transfer also involves suspected fraud, compromised credentials, or unauthorized account access, the fraud policy should also apply.

3. Definitions

Key terms

Transfer: An instruction to move funds from a source account or payment instrument to a recipient account or beneficiary.

Remittance: A payment or transfer of funds, commonly to a recipient in another country or currency, processed through an available remittance service.

Sender: The customer or authorized party that initiates a transfer.

Beneficiary: The intended person or organization receiving the funds.

Beneficiary Details: Information used to identify and route a payment, which may include the recipient name, account identifier, bank or routing details, country, and other required fields.

Payment Reference: An identifier assigned to a transfer or provided in its confirmation to help locate and track the payment.

Pending Transfer: A transfer instruction that has been received or initiated but has not reached a confirmed final status.

Rejected Transfer: A transfer that has not been accepted or completed and has been declined or returned according to the applicable processing rules.

Recall or Recovery Request: A request to attempt to stop, retrieve, or return funds after a transfer instruction has been submitted. A request does not guarantee recovery.

Refund: A return of funds associated with a prior payment or transfer, subject to the transaction circumstances and applicable rules.

Exchange Rate: The rate used to convert one currency into another for a transaction, according to the applicable conversion method and timing.

Value Date: The date used for payment or account-processing purposes as determined by the relevant payment arrangement.

4. Transfer Initiation and Authorization

4.1 Preparing a transfer instruction

Before submitting a transfer, the sender should select the appropriate source account, enter the beneficiary information, specify the amount and currency, provide any required payment purpose or reference, and review the displayed details. Required fields may differ by destination, payment route, currency, beneficiary type, or channel.

The sender is responsible for checking that the recipient details are accurate and complete. A transfer may be delayed, rejected, or sent to an unintended recipient if details are missing, invalid, inconsistent, or entered incorrectly. If a field is unclear, the sender should obtain verified information before confirming the instruction rather than guessing.

4.2 Authorization and confirmation

A transfer is treated as authorized only in accordance with the applicable authentication and approval process. The channel may require a password, one-time passcode, in-app approval, transaction confirmation, or other permitted authentication method. Security credentials must not be shared with another person or placed in a complaint narrative.

Before confirming the instruction, the customer should review the amount, currency, beneficiary, fees and exchange-rate information shown, where available. A screen showing that an instruction was submitted or received does not necessarily prove that the recipient has received the funds.

The customer should retain the transfer reference or confirmation. If no reference is shown, the customer should record the date, approximate time, amount, currency, source account used, and beneficiary information sufficient for support to locate the request.

4.3 Changes after submission

Once a transfer has been authorized or submitted for processing, changes to the beneficiary, amount, currency, or payment details may not be possible through the original instruction. The customer should contact the authorized support channel promptly if an error is identified.

Any change, cancellation, or correction is subject to the payment status and applicable processing rules. The customer must not be told that an instruction has been changed or stopped unless the relevant system or responsible team confirms that result.

5. Beneficiary Setup and Recipient Information

5.1 Beneficiary creation and verification

Where a service permits beneficiaries to be saved, the customer must enter the information required for the intended payment route. Additional verification may be required before a beneficiary can be used, particularly where the recipient details are new, have changed, or trigger a security check.

Customers should verify beneficiary details using a trusted source and should be cautious of requests to change account details received unexpectedly by email, messaging applications, telephone, or other communication channels. Where a message appears suspicious, the customer should independently confirm the details before sending funds.

5.2 Correctness of recipient details

The beneficiary name and account or routing details should be checked against the recipient's verified instructions. A correct name alone may not be sufficient to route a transfer correctly, and a correct account identifier may still relate to an unintended recipient if the details were supplied incorrectly.

If a customer discovers that incorrect details were entered, the customer should promptly submit a correction, cancellation, recall, or recovery request through an authorized channel. The request should identify the original transfer and explain which details were incorrect.

5.3 Changes to saved beneficiaries

Requests to add, edit, disable, or remove a saved beneficiary may require authentication and confirmation. Where a beneficiary change is pending verification, the customer should not assume that the new details are active.

Where there is a concern that a beneficiary was added or modified without the customer's permission, the matter should be treated as a potential security incident. Appropriate credential-protection measures and a review of related payment activity should be considered under the authorized process.

6. Processing Times and Transfer Status

6.1 Factors affecting processing

Transfer processing time may depend on the payment channel, destination, currency, cut-off time, business days and holidays, intermediary processing, beneficiary information, verification checks, system availability, and the rules applying to the selected service.

Processing estimates should be taken from the relevant service terms or from a confirmed transaction status. A general estimate must not be presented as a guaranteed arrival time unless the applicable service specifically confirms that commitment.

6.2 Status descriptions

Status labels should accurately describe the stage recorded by the payment system. For example, a transfer may be received, pending, under review, processed, sent, rejected, returned, cancelled, or completed, depending on the service. These labels are not interchangeable and their exact meaning should be interpreted using the relevant channel's status definitions.

A status showing that a transfer was processed or sent may not establish that the beneficiary has credited the funds. Where proof of receipt is needed, the investigation may require confirmation from the relevant payment route or recipient.

6.3 Delayed or missing transfer

If a transfer has not arrived within the applicable expected timeframe, the customer should provide the payment reference, amount, currency, date, recipient details, and any confirmation available. The responsible team should review the recorded status, routing information, processing events, and any rejection or return message.

The customer should be told what is known, what remains under investigation, and whether additional information is required. A delay must not be described as a loss of funds unless the facts support that conclusion.

7. Rejected, Returned, Failed and Duplicate Transfers

7.1 Rejected or failed instructions

A transfer may fail or be rejected because of incomplete or invalid details, insufficient available funds, an account or transaction restriction, verification requirements, destination or currency limitations, technical issues, or other permitted processing checks.

The customer should review any available reason message and confirm the instruction details. If the reason is unclear, the customer may request an investigation. A failed instruction should not be resubmitted repeatedly without checking its current status, because a delayed status update may create uncertainty about whether more than one payment is in progress.

7.2 Returned payments

A transfer may be returned after processing when the recipient information is invalid, the recipient account cannot accept the payment, required processing conditions are not met, or another applicable rule requires return. The returned amount, currency, fees, and exchange-rate treatment depend on the transaction route and applicable terms.

A return should be considered complete only when the relevant records show that funds have been returned or credited. Where the original and returned amounts differ, the customer may request an explanation of any conversion, fee, deduction, or adjustment reflected in the transaction record.

7.3 Duplicate transfers

If two transfers appear to have been submitted for the same payment, the customer should provide both references, dates, amounts, currencies, and beneficiary details. The investigation should determine whether there are two separate instructions, a duplicate posting, an authorization and final posting for one instruction, or another status-related explanation.

A duplicate appearance in a transaction list should not automatically be treated as two completed payments. Any reversal or correction must follow the authorized investigation and adjustment process.

7.4 Technical interruption

If a digital session ends or an error occurs after a customer submits a transfer, the customer should first check transaction history or confirmation records before attempting the payment again. If the outcome remains unclear, the customer should contact support with the available details.

The service team should verify whether the instruction was received, authorized, processed, rejected, or left in an unresolved state before advising the customer to resubmit it.

8. Cancellation, Recall and Recovery of Funds

8.1 Cancellation requests

A customer who wishes to cancel a transfer should contact the authorized service channel as soon as possible and provide the transaction reference and reason for cancellation. Whether cancellation is possible depends on the status of the instruction and the processing rules applicable to that payment.

A cancellation request, acknowledgement, or case reference is not proof that the transfer has been cancelled. The customer must receive confirmation of the actual outcome where the service is able to establish it.

8.2 Recall or recovery requests

Where funds have already been sent or credited, the customer may request an attempt to recall or recover the payment. The request should include the transfer reference, amount, currency, beneficiary details, reason for recovery, and any supporting evidence.

Recovery may depend on whether funds remain available, the recipient's response, the payment route, processing rules, time elapsed, and applicable legal requirements. A recovery request must not be described as a guaranteed reversal, and the customer should be informed that the outcome is subject to confirmation by the responsible process.

8.3 Incorrect recipient or suspected scam

Where the customer reports sending funds to an unintended recipient or being deceived into making a transfer, the case should be reviewed promptly and classified according to the nature of the incident. If the customer alleges impersonation, credential compromise, or unauthorized account access, the fraud-reporting process should also apply.

The team should distinguish between a transfer the customer authorized after being misled, a transfer initiated without the customer's authorization, and an ordinary entry error. Those circumstances may involve different evidence and handling requirements. The category should reflect the facts established so far and may be updated as new information becomes available.

8.4 Recovery status and communication

The case record should distinguish a recovery request prepared, a request submitted, a response received, funds located, funds returned, and recovery unsuccessful. The customer should be updated only on actions and outcomes that have been confirmed.

If recovery cannot be completed, any explanation provided should be based on the available response and applicable rules. The customer should not be given an invented reason or assured that further action will succeed.

9. International Remittances and Currency Conversion

9.1 Information required for international payments

International remittances may require additional beneficiary details, destination information, purpose-of-payment information, identification documents, or other information required by the payment route and applicable rules. Requirements may differ by destination, currency, beneficiary type, and transaction circumstances.

Customers should confirm the receiving details with the intended beneficiary and supply accurate information. Missing, inconsistent, or unverified details may delay processing, trigger a request for clarification, or result in a rejection or return.

9.2 Exchange-rate disclosure

For a transaction involving currency conversion, the customer should review the exchange-rate information and any disclosed conversion charges shown by the applicable service before authorization, where available. The applied rate may depend on the service, transaction route, and processing or settlement time.

If the final amount differs from the amount expected, the customer may request a review using the original amount, currencies, transaction date, posted amount, and reference. The review should consider the rate and charges applicable to the actual transaction rather than assume that a publicly displayed or separately observed rate must apply.

9.3 Intermediary deductions and recipient amount

Some international payment routes may involve intermediary or recipient-side processing charges or other deductions under the applicable arrangement. The amount sent by the sender may therefore differ from the amount ultimately credited to the beneficiary, depending on the selected service and route.

Where a difference is reported, the investigation should examine the transaction confirmation, disclosed charge arrangement, conversion details, and available payment-route information. A specific deduction should not be attributed to an intermediary or recipient without supporting information.

9.4 Compliance checks and information requests

International transfers may be subject to additional verification, screening, or requests for supporting information under applicable legal, regulatory, and service requirements. A transfer may be delayed or placed under review while the required checks are completed.

The customer should provide requested information through an authorized channel. The team should communicate any permitted next steps without disclosing restricted screening details or guaranteeing release before the required review is complete.

10. Fees, Limits and Payment Obligations

10.1 Fees and service charges

Transfer and remittance fees may vary by service, channel, amount, destination, currency, recipient arrangement, and selected processing option. The applicable fee information should be checked in the relevant product terms or schedule of charges before a definitive amount is quoted.

A fee should not be assumed to apply to every transfer simply because it applies to another payment type. If a customer questions a fee, the investigation should identify the applicable service, transaction record, disclosed charge, and any relevant exception or waiver condition.

10.2 Limits and available funds

Transfer limits may apply to individual transactions, daily or periodic totals, beneficiaries, channels, currencies, or particular customer categories. The relevant limit is the one that applies to the selected service and customer at the time of the instruction.

A transfer may be declined or held if the available funds or permitted limit is insufficient, if a required account condition is not satisfied, or if additional verification is needed. Customers should be advised of the confirmed reason where it can be disclosed, rather than being given a guessed explanation.

10.3 Charges on failed or returned transactions

The treatment of fees when a transfer fails, is returned, is cancelled, or is recalled depends on the applicable service terms and the reason or stage at which the payment stopped. The policy does not establish a universal entitlement to refund every fee in all circumstances.

Where a fee refund is requested, the responsible review should determine which charges were applied, whether they were disclosed, and whether the terms provide for an adjustment or refund.

11. Refund Processing and Reconciliation

11.1 Refund request and eligibility

A refund may arise from a returned transfer, an approved correction, a duplicate payment, an overpayment, a confirmed processing error, or another circumstance recognized by the applicable service terms. The customer should state the original transaction reference, amount, currency, date, reason for the request, and any supporting confirmation.

A request for a refund is not itself evidence that a refund is due. The responsible process should establish the basis for the refund and whether the funds have been approved for return.

11.2 Refund method and currency

Where a refund is approved, the method and currency of return may depend on the original payment route, source account, transaction currency, receiving arrangements, and applicable terms. Currency conversion or eligible charges may affect the amount credited.

The customer should be given a clear explanation of the amount and currency being returned when that information has been confirmed. If the return amount differs from the original debit, the difference should be checked against the relevant transaction details and charges rather than assumed to be an error.

11.3 Refund status and timing

Refund status should distinguish between a refund request received, under review, approved, submitted for processing, credited, rejected, or otherwise completed according to the relevant system.

Processing time may depend on the transaction route and the organizations or systems involved. A timeframe should be quoted only when supported by applicable terms or a confirmed processing estimate. If a refund is not received within that timeframe, the customer may request a status investigation using the reference.

11.4 Reconciliation and duplicate refunds

Before issuing an adjustment, the responsible team should verify the original debit, any prior reversal, merchant or recipient refund, returned payment, and previous credits to reduce the risk of duplicate compensation.

If more than one refund or credit appears for the same underlying transaction, the entries should be reviewed to determine whether they represent separate legitimate adjustments, a temporary credit and final adjustment, or a duplicate posting. Any correction must follow the applicable authorization process.

12. Customer Complaint Handling

12.1 Complaint topics

Customers may complain about transfer instructions, beneficiary details, processing delays, missing or returned remittances, incorrect amounts, duplicate entries, exchange rates, fees, cancellation requests, recovery attempts, refund status, or communication about a payment investigation.

A suspected unauthorized transfer, scam, or exposed credential should also be handled under the applicable fraud-reporting and protective-action procedure. Registering a general complaint must not delay a necessary security or payment-recovery request.

12.2 Information and supporting records

A complaint should include a clear description, date of the transfer or request, amount and currency, beneficiary or destination details, payment reference if available, and the action already taken. Relevant receipts, confirmations, rejection notices, messages, and correspondence may help identify the issue.

Only information reasonably needed to identify and investigate the payment should be requested. Customers must not include passwords, PINs, one-time passcodes, or other authentication secrets. Missing information should be recorded accurately and additional information should be requested when necessary.

12.3 Registration, investigation and response

After the complaint is successfully registered, a unique reference should be provided to the customer. The case record should show the issue category, current status, supporting information, pending dependencies, actions taken, and the responsible team or queue.

The customer should receive updates that reflect confirmed status. The complaint should not be described as resolved merely because it has been assigned, a query has been sent, or a refund or recovery request has been submitted. Closure should follow confirmation of the applicable outcome and communication requirements.

13. Customer Responsibilities and Information Protection

13.1 Customer responsibilities

Customers are expected to:

1. Check beneficiary information, payment amount, currency, and applicable fee information before authorizing a transfer.
2. Use authorized channels and complete the required transaction authentication.
3. Keep passwords, PINs, one-time passcodes, and other security credentials confidential.
4. Retain transfer confirmations, references, receipts, and relevant communications.
5. Report incorrect, delayed, missing, duplicate, or unauthorized payments promptly after discovery.
6. Provide accurate supporting information and respond to reasonable requests through authorized channels.
7. Independently verify unexpected changes to beneficiary details before sending funds.
8. Keep customer and contact information current where required for payment processing or verification.
9. Avoid repeating a transfer while the status of an earlier instruction is unclear.
10. Retain complaint references and confirmation of any cancellation, recovery, or refund outcome.

13.2 Confidentiality and minimum necessary information

Customer, account, beneficiary, transaction, and supporting-document information must be handled only for authorized payment, verification, investigation, servicing, and complaint purposes. Access should be limited according to role and operational need.

Payment records should contain enough information to identify and resolve the issue but should not expose unnecessary personal information or authentication secrets. Information must be protected against unauthorized access, disclosure, alteration, or loss and retained according to applicable requirements.

13.3 Record accuracy and audit trail

Material actions and status changes should be recorded with appropriate timestamps and references. Records should distinguish customer statements, verified transaction data, system status, external responses, and unresolved questions.

If a case record is corrected, the update should preserve accountability and should not remove material history needed to understand the investigation. A record should not state that funds were recovered, returned, or credited unless the relevant evidence supports that status.

14. Exceptions, Interpretation and Policy Review

14.1 Interpretation and limitations

Processing times, fees, exchange rates, transfer limits, refund eligibility, cancellation rights, recovery outcomes, and evidence requirements depend on the selected payment service and applicable terms. This policy does not create a universal deadline, fixed fee, or guarantee that a transfer can be stopped or funds recovered.

Where the available policy documents do not establish a specific condition, the condition must not be invented or presented as confirmed. The customer should be directed to the appropriate authorized channel for clarification, or the case should be referred to the responsible team.

14.2 Project workflow integrity

Within ComPlaintAI-Bank, a complaint or transfer issue may be recorded in the project's database, categorized, and assigned to an internal queue according to the configured workflow. The system may confirm registration only after the database save succeeds.

The project must not claim to have initiated a real payment cancellation, contacted a recipient, recalled funds, processed a refund, or escalated the case externally unless a connected and authorized service confirms that action. Where no external integration exists, the response should describe the action as a recorded request or recommended next step.

14.3 Policy review

This policy should be reviewed when payment services, transfer routes, refund processes, security controls, data-handling practices, or applicable requirements change. The policy version and related procedures should be kept consistent across the ComPlaintAI-Bank knowledge base.

Any revised clause that introduces a specific limit, timeframe, fee, or customer entitlement should be supported by the current applicable source before being treated as an operational requirement.
